

Lecture - 2

```
Step 1 ← import java.lang.*;
        class First → Step 2
        {
Step 3 ← public static void main(String args [])
        {
            System.out.println("Hello World"); → Step 4
        }
    }
```

Step 1: Import statement

Step 2: creating class with name First

Step 3: writing main() method

Step 4: writing println() method

Step 5: Save file and give name similar to class name like **First.java**

Notes :

1. Every class start with opening curly braces like ({) and end with closing curly braces like (}).
2. Every method has also opening and closing curly braces.

Run Program:

Step 1: Go to command prompt

Step 2: Go to directory where you save your file using cd dirName

Suppose you have saved your file inside e: drive then type

On command prompt **e: enter and then move inside directory use**
cd <DirectoryName>

Step 3: javac First.java(It will generate .class file)

Step 4: java First (it will give result)
